

Downloads in the period
15th Dec. 2001 to May. 31st 2004

Figure shows megabyte and linear regression line based on server statistics “monthly total”.
The flat part in the middle was during v2.1. The shift upwards came with release of v3.0.

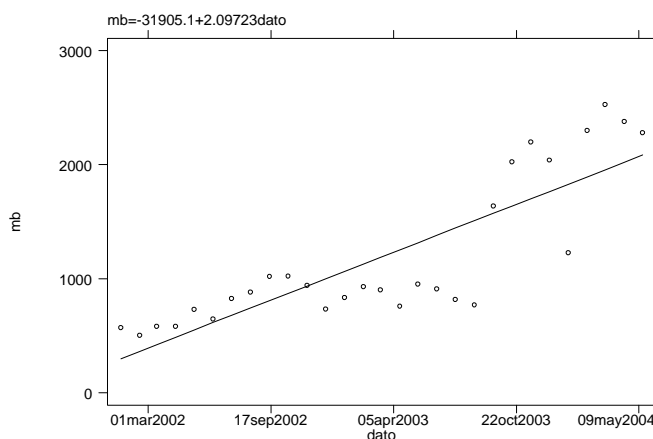

Table shows counts by file

Program download v1.0-v2.0	?	Server logging not available.
Program download (v2.1a)		V2.1a released Dec 17 th 2001

All documentation files	95930	

Note that any file not in top50 for a given month is not included here. Counts are reliable for the program and major documentation. Several minor files had figures below 100 these are not included. The summary was made on aggregated log files only showing top50 files each month. In addition to the files downloaded from the main server EpiData and documentation is found in around 10 servers around the world and on “software selection CD’s”. Counts from these are unknown.

Frequency table of hits by country. A country must be among top 50 in at least one month to appear in the list. Continued next page. Alphabetical order. See notes below table.

Unresolved/Unknown	520,847	42.51
Denmark*	96,402	7.87
Total	1,225,197	100.00

Danish results too large since they include all website maintenance operations.
Note that approx 50% is unknown or “international” in general, e.g. .com, .org, .net

Note on calculation of download statistics. The counts above are a bit different than previously published for v2.1 (about 30% lower). The logfiles have been re-analysed since the first analysis could have included partial downloads.
